

Tk 191/4

$$3(x + 4) = 3x + 12$$

$$2(x - 4) = 2x - 8$$

$$5(4 - x) = 20 - 5x$$

$$(-4 + x) * 2 = -8 + 2x$$

$$3(2x + 1) = 6x + 3$$

$$2(2x - 1) = 4x - 2$$

$$3(1-2x) = 3 - 6x$$

$$(-3 + 4x)*3 = -9 + 12x$$
